Acute Stress Disorder & Posttraumatic Stress Disorder in Children & Adolescents

A Practitioner Guide to Treatment
This guide provides an overview of important points to consider in the assessment and treatment of PTSD and ASD in children and adolescents.

The practitioner checklist later in this document can help to guide assessment and treatment planning.

**What is a traumatic event?**
Any event in which the child or adolescent is exposed to actual or threatened death, serious injury, or sexual violence has the potential to be traumatic. Exposure to such events can occur in different ways:

**Children aged 6 years or younger**
- Directly experiencing the event
- Witnessing, in person, the event as it occurred to others, especially primary caregivers
- Learning that the event occurred to a parent or caregiver

**Children/adolescents older than 6 years**
- Directly experiencing the event
- Witnessing, in person, the event as it occurred to others
- Learning that the event occurred to a close family member or close friend

These types of events are relatively common; by the age of 16 years more than two thirds of children will have experienced at least one traumatic event.

Not all young people exposed to such events will develop significant psychological problems. The use of the term potentially traumatic events (PTEs) has been advocated to highlight this point.

**Common mental health and behavioural problems after trauma**

<table>
<thead>
<tr>
<th>All ages</th>
<th>Preschool-aged children</th>
<th>Primary school-aged children/adolescents</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Sleep problems</td>
<td>• Temper tantrums</td>
<td>• New awareness of own mortality</td>
</tr>
<tr>
<td>• Irritability, anger, aggression</td>
<td>• Oppositional behaviour</td>
<td>• Survivor guilt</td>
</tr>
<tr>
<td>• Concentration and memory problems</td>
<td>• Regression in/loss of previously mastered developmental skills (e.g., speech, toileting)</td>
<td>• Substance use</td>
</tr>
<tr>
<td>• Hypervigilance</td>
<td>• General anxiety</td>
<td></td>
</tr>
<tr>
<td>• Depression</td>
<td>• Separation anxiety</td>
<td></td>
</tr>
<tr>
<td>• Development of specific trauma-related fears (link may not always be obvious)</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**DSM-5 Acute stress disorder criteria**
- Exposure to traumatic event (see above)
- Presence of multiple symptoms from any of the five categories of intrusion, negative mood, dissociation, avoidance, and arousal
- Persistence of symptoms for 3 days to 1 month after trauma exposure

ASD affects approximately 8-20% of children and adolescents exposed to trauma.

**DSM-5 Posttraumatic stress disorder criteria**
- Exposure to traumatic event (see above)
- Persistence of symptoms for at least 1 month after trauma

**In children aged 6 years or younger**
- Presence of one intrusive symptom, one symptom of avoidance or negative alteration in cognition, and two arousal symptoms

**In children/adolescents older than 6 years**
- Presence of one intrusive symptom, one avoidance symptom, two symptoms of negative alterations in mood or cognitions, and two arousal symptoms

For full DSM-5 criteria, refer to Appendix 5 of the full Guidelines, available at www.phoenixaustralia.org
PTSD prevalence

- Up to 6% of children and adolescents in the general population
- Up to a third of those exposed to trauma

Relational PTSD patterns

If parents or caregivers are also affected by PTSD, this may adversely affect their parenting in three ways:

- **Withdrawn/unresponsive/unavailable**
  The adult’s own trauma-related symptoms may make him or her less available to the child. The ability to read, recognise and respond sensitively to the child can be significantly compromised.

- **Overprotective/constricting**
  Parents may become overprotective, which can send negative messages to a child, including, ‘the world is not safe’, and ‘there is still something to be frightened of’.

- **Re-enacting/endangering/frightening**
  A traumatised adult may become preoccupied with reminders of the traumatic event and attempt to discuss the event repeatedly with their child.

For young children experiencing posttraumatic stress, the mental health of caregivers should be attended to first, or at the same time.

Key risk factors for PTSD

</tr>
<tr>
<td></td>
<td>Psychiatric comorbidity</td>
</tr>
<tr>
<td></td>
<td>Poor family functioning</td>
</tr>
<tr>
<td></td>
<td>Use of coping strategies such as distraction and thought suppression</td>
</tr>
</tbody>
</table>

PTSD course and prognosis

In preschool-aged children, symptoms of PTSD tend to be persistent over time. PTSD in very young children may also be associated with a range of poor developmental outcomes.

Among older children and adolescents with PTSD, approximately one third will recover spontaneously within a year, while one third will respond well to treatment. A more chronic course of PTSD will affect the remainder of those exposed, many of whom may still be affected several years after trauma exposure.

Common comorbid conditions

Treatment recommendations

**Interventions for children and adolescents with PTSD**

**C** For children and adolescents of school age with PTSD, developmentally appropriate trauma-focused cognitive behavioural therapy should be considered.

**GPP** Given that retention in therapy and the effectiveness of trauma-focused cognitive behavioural therapy with children and adolescents both require strong parent and/or caregiver involvement, an initial phase of trauma-focused cognitive behavioural therapy with this group is engagement of the parent(s) to improve their understanding and support of this treatment modality.

**Individual versus group therapy**

**C** For children with PTSD, individual psychological interventions should be considered in preference to group interventions.

**Cohen’s Protocol for Child TF-CBT (PRACTICE)**

- **Psychoeducation:** about the type of traumatic event experienced, common trauma reactions, and the TF-CBT approach, as well as parenting skills
- **Relaxation:** e.g., controlled breathing, progressive muscle relaxation
- **Affective modulation skills:** identification of feelings, positive self-talk, thought stopping, positive imagery, problem-solving, and self-regulation of negative affective states
- **Cognitive coping and processing:** monitoring and changing inaccurate, unhelpful thoughts
- **Trauma narrative development and processing:** creating a narrative of the child’s trauma experience and helping the child to correct cognitive distortions related to this experience
- **In vivo exposure:** gradual exposure to feared, trauma-related stimuli
- **Conjoint parent/child sessions:** in which the child shares their trauma narrative with their parent(s), and other family issues are addressed
- **Enhancing safety/future development**

**School-based interventions**

**C** For children exposed to trauma with symptoms of PTSD, where they were exposed to the same event, a school-based trauma-focused cognitive-behavioural intervention aimed at reducing symptoms of PTSD should be considered.

**GPP** An integrated model between education and health providers that facilitates appropriate support and referral is recommended. It is recommended that schools provide a facilitative function in intervening with children following trauma, especially after large-scale traumas.

**Pharmacological interventions**

**D** For children and adolescents with PTSD, pharmacotherapy should not be used as a routine first treatment over trauma-focused cognitive behavioural therapy.

**D** For children and adolescents with PTSD, pharmacotherapy should not be used routinely as an adjunct to trauma-focused cognitive behavioural therapy.

**GPP** Prescription of antidepressants in children should be guided by specific practice guidelines on depression, and practitioners should be aware of age-related side effects.
Treatment recommendations

What about early interventions?

<table>
<thead>
<tr>
<th>Grade</th>
<th>Recommendation</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>B</strong></td>
<td>For children exposed to a potentially traumatic event, psychological debriefing should not be offered.</td>
</tr>
<tr>
<td><strong>GPP</strong></td>
<td>Psychological first aid may be appropriate with children in the immediate aftermath of trauma, however if it is used there must be access available to infant, child and adolescent mental health specialists if and when required.</td>
</tr>
<tr>
<td><strong>CP</strong></td>
<td>Trauma-focused cognitive behavioural therapy may be useful as an early psychological intervention for children with a diagnosis of ASD in the initial four weeks after the traumatic event, based on the positive evidence for cognitive behavioural therapy in children with PTSD. However, the effectiveness of this approach with ASD in children is not yet established.</td>
</tr>
<tr>
<td><strong>D</strong></td>
<td>For children exposed to a potentially traumatic event, pharmacotherapy should not be used as a preventive intervention for all those exposed.</td>
</tr>
</tbody>
</table>

Other Good Practice Points

- **Assessment**
  When assessing a child or adolescent for PTSD, healthcare professionals should ensure that they separately and directly assess the child or adolescent for the presence of PTSD symptoms. It is preferable not to rely solely on information from the parent or guardian in any assessment.

- **Children**
  Children, ranging from infants and pre-schoolers to older children and adolescents can be affected significantly by traumatic events, at higher rates than adults. Practitioners need to be conscious of this risk, must be proactive in assessing the range of psychological impacts of trauma, and should be prepared to provide appropriate assistance, including referral to specialist services if needed.

- **Psychoeducation**
  For children exposed to trauma, psychoeducation should be integrated into a stepped-care approach that involves parents and the range of health, education and welfare service providers, and includes monitoring, targeted assessment and intervention, if necessary.

- **Information**
  Information is often provided to assist children following traumatic events. The content, when used, should be of high quality and tailored to the traumatic event type and the target audience. Information given following traumatic events may include: a) information about likely outcomes (most frequently positive); b) reinforcement of existing and new positive coping; c) advice on avenues for seeking further assistance if required; and d) possible indicators of a need for further assistance. Information following traumatic events may also include a recognition of the role of, and impact on, caregivers, siblings and teachers.

- **Managing parent distress**
  Parents and caregivers provide a protective/buffering function against child traumatic stress. Clinicians should be aware of the potential for parents’ own distress or other factors to compromise their capacity to provide a protective/buffering function. If distress or other relevant factors are identified, the clinician should respond accordingly.

Guide to recommendation grades

<table>
<thead>
<tr>
<th>Grade</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>A</strong></td>
<td>Body of evidence can be trusted to guide practice</td>
</tr>
<tr>
<td><strong>B</strong></td>
<td>Body of evidence can be trusted to guide practice in most situations</td>
</tr>
<tr>
<td><strong>C</strong></td>
<td>Body of evidence provides some support for recommendation(s) but care should be taken in its application</td>
</tr>
<tr>
<td><strong>D</strong></td>
<td>Body of evidence is weak and recommendation must be applied with caution</td>
</tr>
<tr>
<td><strong>CP</strong></td>
<td>Expert opinion, developed in the absence of evidence (after evidence review)</td>
</tr>
<tr>
<td><strong>GPP</strong></td>
<td>Expert opinion, developed in the absence of evidence (without evidence review as evidence known not to exist)</td>
</tr>
</tbody>
</table>
Things I can do to feel better

1. Talk about my problem with a friend or trusted adult
2. Hang-out with my friends
3. Listen to my favourite music
4. Ask a trusted adult or a friend for a hug
5. Do some exercise with a friend or family member (running, dancing to music, riding my bike, going for a walk)
6. Make something by drawing, painting, sewing, knitting or cooking
7. Have a warm bath
8. Do a quick relaxation exercise
9. Write in my diary
10. Use positive self-talk

Positive self-talk

Sometimes the thoughts in our heads make us feel happy, but sometimes they can make us feel sad, angry, worried or stressed. Positive self-talk helps to chase these unhelpful thoughts away so we can feel less stressed. If you are thinking about something scary that happened, or are worried that something bad might happen, try using positive self-talk to make you feel better.

I am safe now.
I was strong to survive that.
I have people who can help me.
I have done a lot of things well before - I'm sure I can again!

Quick relaxation exercises

Calm breathing
1. Sit in a chair or lie on the floor
2. Take a breath in through your nose and count to 3 and imagine a soothing colour
3. Breathe out through your mouth and say the word ‘calm’ to yourself
4. Repeat this 10 times

Imagine a happy place
1. Imagine a calm and happy place
2. Tell yourself what you can see, hear, smell and feel in this happy place
3. Practise your calm breathing whilst you are picturing your happy place

Quick muscle relaxation
1. Hold your arms above your head – feel the tension in them – now drop your arms down by your side and feel them relax
2. Practise tensing and then relaxing muscles in your hands, legs, face, and stomach, and wherever else you feel stress.
### Practitioner checklist
Practitioner checklist to help guide assessment and treatment planning.

<table>
<thead>
<tr>
<th>Exposure</th>
<th>Determine recent or past exposure to a potentially traumatic event</th>
</tr>
</thead>
<tbody>
<tr>
<td>Screen</td>
<td>Screen for diagnosis of PTSD or ASD. Include direct reports from the child as well as parent or carer. See the full Guidelines for recommendations about screening tools.</td>
</tr>
<tr>
<td>Assess</td>
<td>If the child screens positive for PTSD or ASD, conduct a comprehensive and developmentally appropriate clinical assessment. Include direct reports from the child as well as a parent or carer. See the full Guidelines for diagnostic criteria for PTSD and recommendations regarding assessment tools. Assess for comorbid conditions as described on page 2. Assess the wellbeing of parents or carers.</td>
</tr>
<tr>
<td>Safety</td>
<td>Ensure stabilisation and safety. Develop self-care plan with client and parent or carer. Provide psychoeducation about PTSD and ASD and treatment options when developing a self-care plan.</td>
</tr>
<tr>
<td>Treatment</td>
<td>Either refer for, or provide if appropriately trained, developmentally tailored trauma-focused therapy. See full Guidelines for recommended treatments.</td>
</tr>
<tr>
<td>Caregivers</td>
<td>Prioritise engagement of parent or carer as early as possible in therapy and ensure child’s correct developmental level is targeted. Include parents or carers and family members as appropriate in treatment. Ensure liaison with school. Determine parent mental health status and manage appropriately.</td>
</tr>
<tr>
<td>Care plan</td>
<td>Go through self-care plan (previous page) with your client.</td>
</tr>
</tbody>
</table>
Useful information and resources are available through the following organisations.

**Trauma and posttraumatic mental health**
Phoenix Australia - Centre for Posttraumatic Mental Health provides information and useful resources about posttraumatic mental health, for practitioners and people directly affected, at [www.phoenixaustralia.org](http://www.phoenixaustralia.org).

**Alcohol and other drugs**

**Asylum seekers and migrants who have experienced torture and trauma**
The Forum of Australian Services for Survivors of Torture and Trauma (FASST) has a list of agencies that provide support, advocacy and treatment at [www.fasstt.org.au](http://www.fasstt.org.au).

**Carers**
Carers Australia offers information, resources and access to support groups at [www.carersaustralia.com.au](http://www.carersaustralia.com.au) or call 1800 242 636.

**Children and young people**

Information on a range of mental health and related issues that affect teenagers and young adults is available from ReachOut at [www.reachout.com.au](http://www.reachout.com.au).

Information on trauma and mental health, where to get help, and online support is available from headspace, the National Youth Mental Health Foundation. Visit [www.headspace.org.au](http://www.headspace.org.au).

**Children of parents with a mental illness**
The COPMI resource centre provides information, resources and access to services at [www.copmi.net.au](http://www.copmi.net.au).

**Depression and anxiety**
Several organisations offer access to information, resources and services, including beyondblue at [www.beyondblue.org](http://www.beyondblue.org) and the Clinical Research Unit for Anxiety and Depression at [www.crufad.org](http://www.crufad.org).

**Disasters**
The Red Cross has information, advice, and resources for kids, teenagers, teachers, and parents. Visit [aftertheemergency.redcross.org.au](http://aftertheemergency.redcross.org.au).

**Domestic violence and sexual abuse**
The Domestic Violence & Incest Resource Centre is a statewide Victorian service that can provide the name and contact details of agencies and support groups throughout Australia at [www.dvrcv.org.au](http://www.dvrcv.org.au).

**Immigrant women’s domestic violence services**
There are several services in each state and territory. See [www.iwdvs.org.au](http://www.iwdvs.org.au) or [www.speakout.org.au](http://www.speakout.org.au) for a list of services throughout Australia.

**Parents**
Parentline provides telephone counselling to parents and careers of children aged 0 to 18 years. Visit [www.parentline.com.au](http://www.parentline.com.au) or call 13 22 89.

Information on how to talk to children and teenagers about their problems and where to find help, as well as online and telephone support, is available through headspace at [www.headspace.org.au/parents-and-carers](http://www.headspace.org.au/parents-and-carers).

**Psychologists**
The Australian Psychological Society has a register of psychologists and lists their speciality at [www.psychology.org.au](http://www.psychology.org.au) or call 1800 333 497.

**Sexual assault**
The Australian Centre for the Study of Sexual Assault has a list of the main sexual assault services in Australia at [www.aifs.gov.au/acssa/crisis](http://www.aifs.gov.au/acssa/crisis). All states and territories have crisis lines listed in the front page of the White Pages.

**Veterans and their families**
The Department of Veterans’ Affairs can provide information and referral advice at [www.dva.gov.au](http://www.dva.gov.au) or on 1800 555 254. The Department can provide the phone number of the Veterans and Veterans Families Counselling Service in your state and territory.

**Victims of crime**
A list of victim support hotlines in each state and territory, as well as information about other relevant services throughout Australia, is available at [www.victimsupport.org.au](http://www.victimsupport.org.au).

**Vocational rehabilitation**
Self-care plan and Practitioner checklist
